

Code Lyoko

A Word Hunt Game

By: Aggrey Narh, Johana Hernandez, Lizandro Galvez, Beimnet Beyene

File Purposes

This file (INST326 - CODE LYOKO REPORT) - instructions for the game and other project related goodies.

Word_Hunt.py - This is where the heart of our code is. Every class and function is written here and this is where the code is run.

How to run the code:

In the terminal, you would type “python” or “python3” if you are Mac, then the collab_excercise.py file.

Windows: python collab_excercise.py

Mac: python3 collab_excercise.py

How to use the program

- After the code is runned it will prompt the user to enter a player name and a topic (from available word categories)
- After entering a word it will validate if the guess belongs to the topic or if it had not been guessed.
- To end the game type done
- SCORING
 - Points are awarded after the validation after each valid word
- End of game output
 - When the game ends it will display the
 - Player name
 - Topic played
 - Number of words
 - Final score
 - Total time played
- ERRORS:
 - Invalid word- The word is not part of the topic list
 - Word already guessed- The word has already been guessed

- Not a valid word- The input does not match the format

Annotated Bibliography

Python Software Foundation. (2025). Time access and conversions: Function. Python Documentation. <https://docs.python.org/3/library/time.html>

This source is from Python Software Foundation that explains how to implement python's time module. This source was used to learn how to track how long it takes a player to find words. The source helped to make sure the time function is written properly to avoid using it incorrectly.

Bro Code. (2021, November 24). Python time module [Video]. YouTube.
<https://www.youtube.com/watch?v=Qj3GIL5ckQA&t=425s>

This source demonstrates several ways to handle functions for time. As well as it provided an example of how to use the time function. This video helped understand how long it would take a player to find words.
